The **G-Sleeve®** is an innovative safety device that is **specifically designed to eliminate the risk of injury of an affected limb when treating mastectomy, lumpectomy with lymph node removal and dialysis patients.**

The **G-Sleeve®**'s main purpose is to protect the **"affected arm"** of the patient by **alerting all nurses and medical staff of the potential complications that may occur from unwanted blood pressures, intravenous access, and blood draws.**

The **G-Sleeve®** greatly reduces the risk of medical errors that may possibly lead to severe conditions such as **lymphedema.**

The danger of having a **blood pressure test** on an **"at-risk arm"** or an arm affected by lymphedema is that the squeezing involved can cause possible further damage to already fragile lymphatics and blood vessels. If this occurs, it could **cause the lymphedema or worsen the condition.**

G SLEEVE®

Comfortable • Latex Free • Effective • Inexpensive
Comforting • Safe • Necessary

Lymphedema is caused by the inability of the arm to remove even the normal excess fluids of body dynamics. When fluids are added, **with the administration of an IV**, the arm becomes catastrophically overloaded, swells and is left unable to rid itself of the extra fluid. This may occur if the IV becomes infiltrated and fluid leaks outside of the vein.

The use of needles in an arm with lymphedema poses a great threat of infection. Every break of the skin creates potential entry foci for bacteria. Because of the immunodeficient state of the arm any infection can and often does escalate quickly into cellulitis. **These infections will increase the severity of the lymphedema.**

The **G-Sleeve®** is used as a simple yet highly effective **"alerting tool"** stating that there is to be:

NO BLOOD PRESSURE • NO INTRAVENOUS • NO BLOOD DRAWS
Administered on Affected Arm!!!

The **G-Sleeve®** can be used **pre-operatively, peri-operatively, post-operatively** as well as on the medical or surgical floor **for the status-post mastectomy patient.**
Also useful for PICC & MID line protection!

The **G-Sleeve®** was **designed by a registered nurse** for the protection of the patient by preventing errors that may very easily occur in **any hospital or outpatient setting.**

The **G-Sleeve®** provides the perfect combination of **safety, comfort, and peace of mind for patients, nurses, and doctors** by alerting the staff of the patient's potential risk of complications that may occur, should a patient's affected limb be mistreated.
